

Customize anything with Riddle's CSS quiz editor

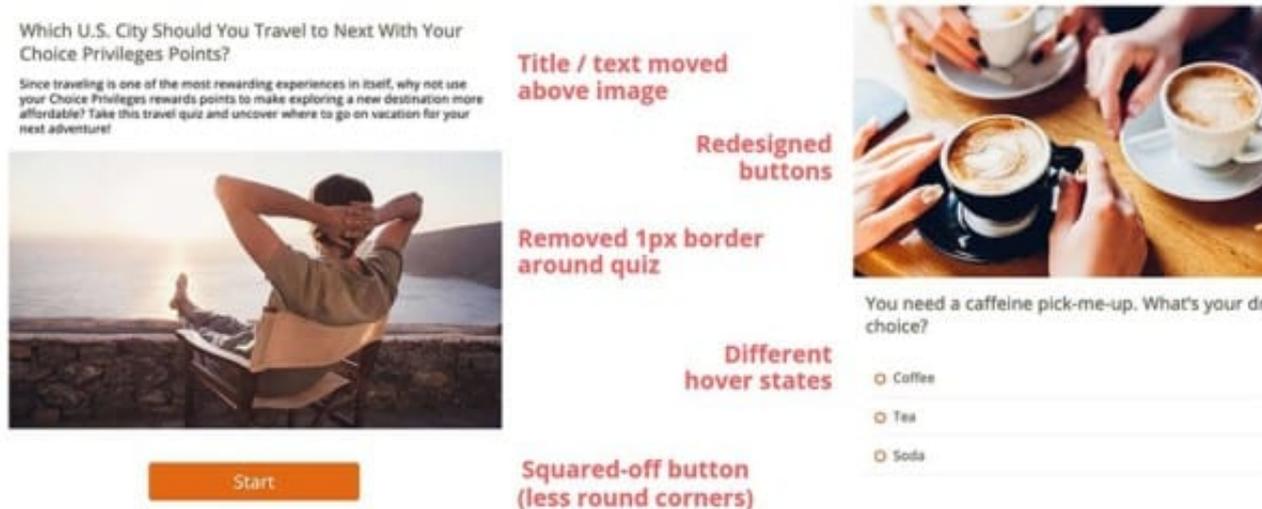

Did you know that Riddle's quiz maker has a powerful CSS quiz editor? You can customize every visual aspect of your Riddle quiz, list, or poll to match your website's look and feel. Yup – from button styling to text, colors to borders, you have control over nearly every element of a Riddle – and you don't have to be a code guru to do it. Each time you create a quiz, it will feel completely organic to your site – not a 3rd party widget. See how Choice Hotels used our CSS quiz editor for their ['Where should you go on vacation?'](#) quiz:

BEFORE: Choice Hotels quiz – no CSS

This screenshot shows the original quiz interface. The title 'Original title page' is positioned to the right of the main image. The text 'Standard button styling' is centered below the image. The text '1px border, rounded corners' is positioned to the right of the image. The quiz content includes a question about U.S. cities, a paragraph of text, and a 'Start' button.

AFTER: Choice Hotels quiz – with CSS editor

This screenshot shows the quiz interface after CSS editing. The text 'Title / text moved above image' is positioned to the right of the main image. The text 'Redesigned buttons' is positioned to the right of the image. The text 'Removed 1px border around quiz' is positioned to the right of the image. The text 'Different hover states' is positioned to the right of the image. The text 'Squared-off button (less round corners)' is positioned to the right of the image. The quiz content includes a question about U.S. cities, a paragraph of text, and a 'Start' button.

What can you customize with our CSS quiz editor?

For customers on [our Team plan](#), our CSS quiz editor now gives full control over almost every aspect of your Riddle. This is just the tiniest tip of the iceberg:

- Bullets
- Buttons – round or square?
- Fonts
- Colors of any element
- Background – use colors or background images

CSS quiz editor – live quiz examples

Our CSS quiz editor is part of our Team plan – along with [multi-user accounts](#), [uploading your own fonts](#), and loads more. Check out how Price Waterhouse Cooper modified the CSS for [a series of one question quizzes into this report targeting cognitive bias](#) among C-level executives. They changed the borders, buttons, uploaded their own font and more – all so that each quiz more closely match their site.

Three biases that impede local content development: Seeing through the illusions

Dr. Shihab Elbouni, Dr. Raed Kumbargi, Dr. Yahya Anouti, Anthony Yammine
September 3, 2018

The rise of local content development policies

Governments in developing economies are increasingly crafting policies to expand the share of local goods and services in large infrastructure projects worth billions of dollars. Doing so can boost growth, create jobs, and support national economic strategies. The countries that are the heaviest on local content development are also those spending the most on infrastructure. Between 2008 and 2017, countries from outside the Organisation for Economic Co-operation and Development (OECD) spent US\$13 billion on artificial infrastructure, compared to \$9 billion for OECD countries. In the coming 20 years, this gap will widen, with non-OECD states projected to spend more than \$57 billion on infrastructure projects, compared to \$34 billion by OECD countries.

New OECD countries are implementing a larger number of local content measures

Country with local content measures 2018

Illusions, biases, and distortions

Many governments have a sense of urgency that, although commendable, can lead to short-sighted and counterproductive policies. Specifically, there are biases that can interfere with robust, fact-based analysis and policy design. With regard to local content development policymaking, there are three deeply rooted illusions.

1 - Confirmation bias

You hear that company X that you have invested in is about to declare bankruptcy. What do you search for to confirm if your investment is still solid?

- Is company X going bankrupt?
- Recent problems with company X
- Financial performance of company X
- Companies declaring bankruptcy

False aggregation of demand

Confirmation bias, the overweighting of evidence consistent with a favored belief, manifests itself in local content development policies as a persistent tendency to overestimate the localization potential of certain products. Usually this is due to vague categorization that leads to a lack of specificity and detail. For example, a strategy may identify products like pumps, motors, or valves as categories in which aggregating demand across several state-owned enterprises offers significant opportunities for localization. Such an approach neglects the reality that even the simplest of products can exhibit a significant diversity of sizes, materials, and designs. A valve, for example, could be anything from a quarter-inch plastic turn valve to a large-diameter, nickel-chromium, double-flange butterfly valve. One valve for penicillin whereas the other requires precise engineering and can cost tens of thousands of dollars. Grouping two such disparate objects into the same category crosses the illusion of a large market opportunity where none exists.

English Premiership champions Chelsea

FC are big fans of using Riddle's quiz maker to engage their fans, both on- and off-season. They used the creative freedom of our CSS quiz editor in their timed ["Arsenal vs. Chelsea" quiz](#):

Getting started with our CSS quiz editor

Let's take a look on how to get started with our CSS quiz editor:

1. Go to the 'Customize' step > 'Style' tab.
2. Scroll down to CSS quiz editor.
3. Paste in the new CSS code for any elements you'd like to customize.

To modify the CSS code, you can change the CSS property of each part of the Riddle by first investigating the property name and then adding a new CSS property for the respective class. To investigate the property names, we suggest to use Google Chrome's developer tools:

- Click on 'inspect' then find the element name – typically in this format: `h1.title.ng-binding` (in this case for the title text)
- To change the parameter, just copy this tag along with the specific color or other characteristic.

In this example, we changed the `.riddle-frame` element in the following way before pasting into the CSS

quizzlefit.com

```
.riddle-frame .content-div .footer-content .start-btn { width: 100%; padding: 15px 0; border-radius: 0px;}
.riddle-frame .content-div .choices .choice
.riddle-frame .content-div .page-number {}
```

Original Riddle (no CSS modifications):

New Riddle (with CSS modifications):

Want to save time with our CSS quiz editor?

We've also created this [database of common CSS edits](#) – over 60 tips/tricks on editing/hiding/altering quiz elements and your quiz's visual styles. Just click, copy, and paste the CSS into the CSS quiz editor

Category	Use	CSS snippet
Design options	(Personality test) Move headline and description above image on the first slide	<pre>rid-riddle[data-currentpageindex="0"] .tab-start + .riddle-page { display: flex; flex-wrap: wrap; } rid-riddle[data-currentpageindex="0"] .tab-start + .riddle-page .media-single { width: 100%; order: 2; }</pre>
Hide quiz elements	Hide the 'play again' button	<pre>.play-btn { display:none!important; }</pre>
Hide quiz elements	Hide image attribution link	<pre>.attribution {display:none!important;}</pre>
Hide quiz elements	Hide the percentages / change colors - who selected each answer.	<pre>.percent-number { display:none; } .choice.correct { background: #E6E6E6; color: black; } .choice.correct .percentage-bar { background: #E6E6E6; }</pre>

for your account.

Our CEO

Boris shows a fraction of what's possible with Riddle's CSS quiz editor. He added text overlays, created new placements for sponsor logos and more in [this burger quiz \(in the 'Enterprise' section\)](#).

Ask us anything @ CSS

CSS might seem a little intimidating if you're new to coding. But fear not, we're happy to create a free CSS 'recipe' to blend your Riddle quiz in your site with our CSS quiz editor.

All we need is

a bit of guidance from you – such as the URL you'll be embedding your quiz on, and we'll get our CSS

ninjas on the case. (This is a free service for all subscribers to our Team plan – so don't be shy.) You can also use Riddle's [team style template feature](#) to save any changes you make with our CSS quiz editor. Apply all your customizations with just a click – or make it a 'default' template for any quiz, list, or poll you make going forward.

Any questions @ our CSS quiz editor?

Just give us a shout at hello@riddle.com if you have any questions about CSS (or making a quiz in general). We love to help – and respond in minutes from 7am to 10pm UK time (2am to 5pm EST).
